Quality is like buying oats.

If you want good, clean oats you must pay a fair price.

However, if you are satisfied with oats that have already been through the horse.....

well, they are a little cheaper!

CONVENTION INFORMATION

TIME:

The Convention begins on Sunday afternoon, October 8, 1978, at the Ramada Inn, 600 30th Avenue South, Moorhead, Minnesota 56560, and extends through the evening of Wednesday, October 11, 1978.

PLACE:

All sessions of the Convention will take place at the Ramada Inn. Field trips by bus leaving the Motel are as noted in this program. It is not necessary to stay in the Motel to attend the Convention sessions. Your reservation card (enclosed) must be mailed early enough to reach Motel not later than September 1.

COST:

Those members who attend the Convention Sessions will be charged a fee of \$90 each, or \$30 for a single day or part thereof. Non-member fees are \$120 or \$40 for a single day or part thereof. Non-registered family members who accompany those attending the Convention will be required to pay for extra meals if taken with the Convention group. (See registration form for extra meal charges.) Motel charges are paid separately. Special rates of

\$19 for singles, and \$25 for doubles, and \$4 per extra person, have been arranged for conventioners. Please make your reservation on the enclosed card to obtain these rates.

MEALS:

The Sunday evening buffet, and lunches on Monday, Tuesday and Wednesday, together with the Wednesday evening banquet, are covered in the registration fee.

TRANSPORTATION:

The Ramada Inn offers courtesy cars from the Fargo, North Dakota Airport. Call them on the courtesy phone in the Airport lobby when you arrive. Busing for the field trips from the Motel is free for the registrant.

MANAGEMENT:

The organizers and managers of the Convention are the Board of Directors of the American Institute of Organbuilders. The Convention Chairman is Lance E. Johnson. Inquiries about the Convention, advertising or exhibiting, should be made to: Dennis Unks, 1411 Mulberry Lane, Fairview, PA 16415. Telephone (814) 864-3011.

ACKNOWLEDGMENTS

We wish to thank Organ Supply Industries for sponsoring the John Ferguson Lecture-Recital at Trinity Lutheran Church.

We also wish to express our appreciation to the wives and families of the Directors and Committee Members for their patience and understanding.

A Colorful History

Fargo, N.D. and Moorhead, Mn., share a common history, growth and development, as well as goals for the future. They are twin communities sired by a westward-driving railroad, given life and vigor by hordes of settlers who claimed the vast farming lands opened by the railroads, matured by others who remained to build homes, churches, schools and establish trade and industry. They are shaped in personality by continuously growing population, expanding commerce and services, educational facilities, health care and economic stability.

Although twins, they differ in size, shape and individuality, as well as by their state and local political structure. As neighbors, they are separated by the Red River of the North, but united by day to day exposure to one another. There is a constant exchange of people, goods and services between the two communities and the two states.

The quality of life in Fargo-Moorhead stems from dependence upon the agricultural economy of the fertile 30,000 square mile Red River Valley. Business is geared to the needs of the farming industry; the people, many with rural backgrounds, are industrious and thrifty; they provide a skilled, stable workforce for the area's agribusiness enterprises.

Fargo - Moorhead Today

REED AND FLUE PIPES

D 7141 Freiberg/Neckar

Western Germany

WE'VE COME A LONG WAY IN 200 YEARS ...

BUT SOME THINGS STILL HAVEN'T CHANGED!

During the Revolutionary period, David Tannenberg, of Lititz, Pennsylvania, was respected as one of the great Early American organ builders.

Today at Reisner, Inc., you'll still find that same spirit evident in everything from our smallest component to our largest handcrafted console. There's the same dedication to quality ... the special attention to detail ... and the pride of workmanship displayed by every craftsman at Reisner.

It's why we're proud to say ...
THERE'S NO SUBSTITUTE FOR REISNER QUALITY!

PHYSICAL DATA

Ambient temperature range: 30° to 140°F.

Rated total pressure: Sustained or highly repetitive pressure: 15 psig.

Connections: 1/8" NPT high and low pressure taps, duplicated — one pair side and one pair on back.

Housing: Die cast aluminum. Case and aluminum parts Iridite-dipped to withstand 168 hour salt spray test. Exterior finish is baked dark gray hammerloid.

Accuracy: Plus or minus 2% of full scale (3% on -0 and 4% on -00 ranges), throughout range at 70°F.

Standard accessories: Two 1/8" NPT plugs for duplicate pressure taps, two 1/8" pipe thread to rubber tubing adapters, back mounting spud with washers and jam nut, three flush mounting adapters with screws.

Weight: 1 lb. 2 oz.

Component suppliers to the Organ Builder

A few things we'd like you to know about Peterson and our products.

About Our Products

Peterson Solid State Systems for Pipe Organs are a result of extensive development of solid state switching systems for electronic organs and have been proved in tens of thousands of installations. The first systems for pipe organs have been performing dependably for over a decade. Now the choice of several leading pipe organ builders as original equipment in their new organs, and of independent builders and repairmen all over the country, Peterson Switching Systems have proven themselves in installations of every size from one to 125 ranks.

Peterson products represent far more value than competitive products... for very good reasons. Most important is our exclusive **Small Module Design**. S.M.D. enables us to assemble switching systems and combination actions from only a few types of basic building blocks... that plug together... thus permitting unprecedented flexibility for present as well as future additions and modifications. The modules themselves are specifically designed and tooled for automated production and testing. Specially developed **organ connectors** permit inter-assembly wiring and soldering to be accomplished at our factory by extraordinarily efficient methods and field installation is greatly simplified. If any feature is most noteworthy it is the ease of installation, trouble shooting, and service, made possible by **Small Module Design**.

If you are not using Peterson Solid State shouldn't you find out more about us? You'd expect to have to pay a premium for all of the pluses you get from Peterson. On the contrary, we believe that our prices are generally lower than the cost of old fashioned methods or of competitive products that offer so much less. Write and ask to be put on our mailing list—and when you're in the Chicago area contact us and visit our factory...

Pictured is one of our DUO-SET Combination Actions utilizing **Small Module Design**. This particular unit will handle 1 Division, 16 Pistons, and 32 Stops.

About Our Company:

Peterson has been active in the development and manufacture of organ related products for over 25 years.

Peterson pioneered the use of solid state components long before the term "Solid State" came into common usage—and our innovative research activities have led to the granting of over sixty United States and foreign patents.

Peterson is the leading manufacturer of precision tuning equipment for the music industry, and our first tuner was developed for our own use, for tuning organs.

Peterson represents stability and growth. In 1962, we acquired a 2½ acre site in a southwest suburb of Chicago and built a modern factory to house our growing business. Additional buildings were added in 1975 and again in 1977. Our "team" now includes over 40 people ready to help you and to stand behind everything we make.
